Technical Rider: YourOwn.Show Crowd Mode

For you as host:

Option A (recommended): **Laptop/PC** (Windows/Mac, with current browser) connected to a **projector and speakers**/PA system.

Option B: **Smart TV**, Fire TV Stick, or Apple TV **with web browser**.

For laptops: Connected to a power supply, preferably not running on battery power. Disable screen savers and standby mode. Enable "Do Not Disturb" mode (no emails/pop-ups on the screen, etc.). Extend or duplicate the screen (depending on your setup), browser in full-screen mode (F11).

Internet: Stable (Wi-Fi or preferably LAN cable)

Firewall check: The network must allow WebSockets (for strictly secured company networks, etc.: test yourown.show beforehand!).

Connections: HDMI to projector/screen. HDMI or 3.5 mm jack to room system (PA)/speakers.

Smartphone: To activate the show (you will need one-time access to an email account at the beginning so that you can start the show) and also if you want to participate yourself. In this case, simply join as a participant after registering as a host!
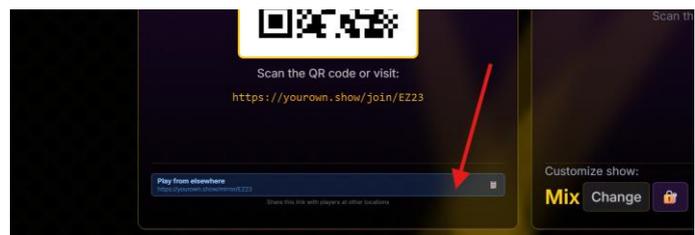

Possibly a handheld **microphone** (sometimes helpful, even though your show will of course be moderated by our digital show hosts).

Emergency backup: Keep a smartphone with hotspot functionality handy in case your home internet goes down, and install a second browser (e.g., Chrome as a backup for Safari).

If individual participants are playing **remotely**/at a different location:

They should have a "playback device" (laptop/PC or smart TV) so that they can participate without any problems using their "controllers" (smartphones).

Share the **Mirror Link** with them before the show starts!

For your guests:

One **smartphone** per participant.

Good **mobile reception (4G/5G)** in the room OR **guest Wi-Fi** that can handle the corresponding number of simultaneous connections (devices).

The **QR code** that appears before the show starts should also be scannable from the back row.

Procedure:

If you already have your individual show link, you can skip steps 1-4 and start directly with step 5!

We recommend running a test beforehand to fix any problems on site directly and in good time!
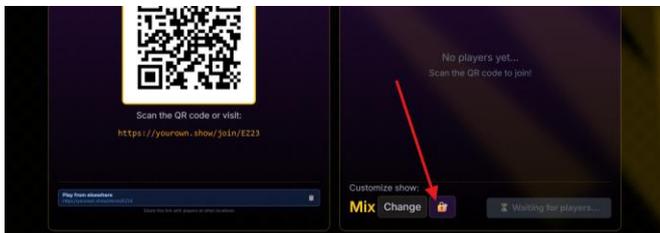

If you want to say something to your guests about the show in advance, we recommend doing so before you finally start the show. Otherwise, you can also pause the show at any time (directly from your host cell phone or on the big screen).

1. **Open yourown.show in the browser** of the display device (laptop/projector or smart TV) and click on "Start your own show" or "Start show."

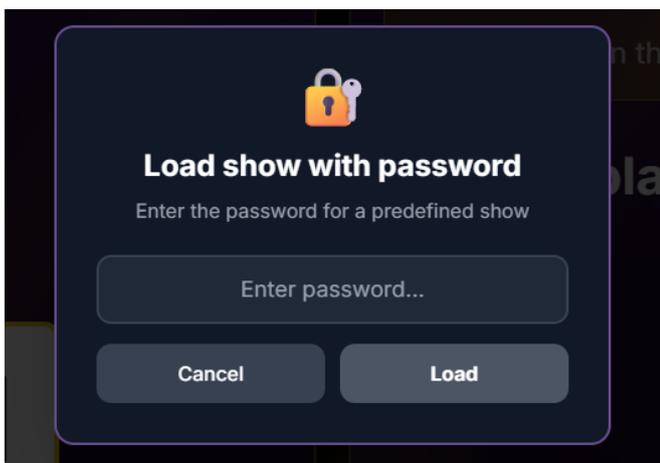

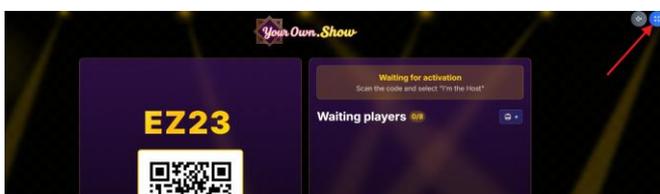

2. Now click on "**Host**."

3. Click on the small **padlock**

(Alternatively, you can now scan the QR code, perform steps 5-7, and then perform step 4 on your smartphone if that is easier).

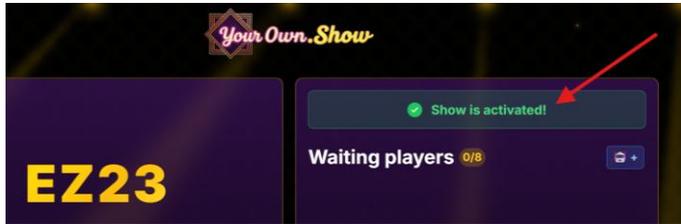

4. Enter your individual **show code** (=the password for your predefined show) and click on "Load."

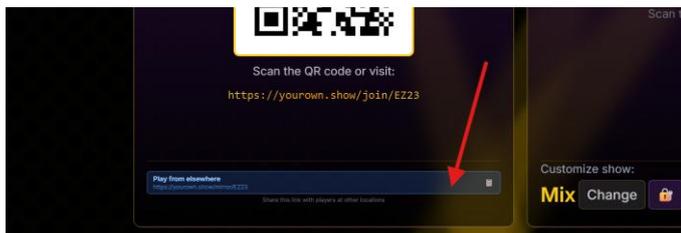

5. Now switch to **full-screen mode** by clicking on the blue circle.

6. Now scan the **QR code** (or alternatively use the link below) and register as a **host (!)**. You will need your email address for this.

7. Once you have logged in and started the show via the **link in your email inbox**, a message will appear at the top of the screen informing you that the show has been activated.

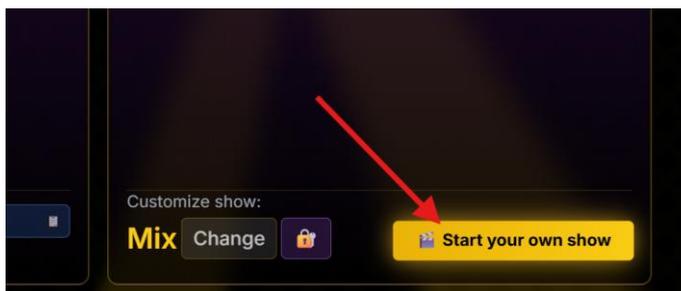

8. If individual participants are playing **remotely**/at a different location, share the **mirror link** with them now. You can also copy/share it directly from your smartphone.

9. **Your guests can now register and join as "players"**

If you want to play along yourself, enter your name and select "Join" on your smartphone now.

(Of course, you can also share the screen with everyone now/turn on the projector—if someone joins earlier, this is not a problem.)

10. Now **wait until all players have joined**.

Once you're ready to go, click on "**Start your own show**" and you're good to go!
